

A Century of Service . . . City of Campbellton - New Brunswick, Canada

The City of Campbellton (NB, Canada) was recently inducted into the Cast Iron Pipe Century Club. Their qualifying pipe is 10-inch cast iron that was installed in 1894 as a feed line from their reservoir to the City. This line remains in service. Shown in the picture (from left to right) are Manon Cloutier, P. Eng., Chief Administrative Officer and Mark Ramsay, Mayor with the City of Campbellton, and Normand De Agostinis, Eng., Senior Regional Engineer with DIPRA.

A few comments from the City are as follows:

“Cast and Ductile pipes are easy to install, low maintenance and easy to locate once installed and buried.”

“It is always very satisfying for a municipality to see that investments last and perform well for a long period of time.”
